iPlayr Visual Styling Review

Oct 15, 2026 · @Manpreet Singh

iPlayr renders a simulated iPod (body, bezel, click wheel) in recognisable hardware colours around a restrained, mostly achromatic screen, driven by six independent user settings and twenty presets; this page lays out every visual rule, token and option so the design team can review the system end to end. Nothing here is compiled or screenshot-verified yet: the values are what the code computes, validated with a mirror of the same maths.

Design direction

The hardware is nostalgic and coloured, the screen is modern and nearly colourless, and one accent per theme does all the highlighting.

- The simulated body, bezel and click wheel use flat hardware colours. Every hex in this document is a design token, not a measurement of an Apple finish.
- Screen surfaces are a stable charcoal (Dark), paper (Light), or one of two period looks (Retro Color, Retro LCD). Menus, lists and settings never take colour from album artwork.
- Exactly one accent per theme. It appears in three places only: the selected row, the progress fill, and the active Volume/Seek toggle on Now Playing.
- Album artwork may tint the background of Now Playing, and nowhere else. It is off in both retro appearances and under Increase Contrast.
- Every colour the user does not pick directly is derived at render time by contrast rules. The user's body, wheel and accent choices are never rewritten by those rules; only the derived values move.

What the user sees

The whole phone is the iPod: a coloured chassis fills the display, a 300pt screen sits in its upper half (portrait) or left half (landscape), and the click wheel sits below or beside it.

Element	What it is	Where its colour comes from
Chassis	Full-screen body with 40pt rounded corners	Body Color, lightened and darkened into a vertical gradient, plus a 1px inner edge
Screen bezel	6pt stroke around the 8pt-radius screen	#0B0D10 on dark bodies, #1A1D22 on light bodies

Element	What it is	Where its colour comes from
Screen	300pt panel; left half menu, right half album-art slideshow; library, player and Cover Flow slide over both halves	Interface appearance tokens
Status bar	26pt header at the top of every screen with title, play state, shuffle, repeat and battery	panelBackground with a 1px divider; Retro Color uses a gradient header
Menu rows	Text rows (17pt) and artwork rows (44pt cover, title, subtitle)	screenBackground; the highlighted row uses the derived selection colour
Click wheel	Ring, centre button and four labels; 62% of body width, 68% on mini/nano bodies	Ring Color, Ring Style, and a glyph colour measured for contrast
Now Playing	Artwork, title block, progress bar, Volume/Seek toggle, transport	screenBackground, or the artwork atmosphere when enabled
Immersive Cover Flow	Full-phone carousel that replaces the chassis	Black backdrop with the selected cover blurred beneath; unchanged by theme

Typography is the system font throughout.

Text	Size and weight
Menu rows and picker rows	17pt regular
Status bar title	13pt semibold
Now Playing title	17pt semibold, two lines maximum
Now Playing artist and album	14pt regular, secondary colour
Queue position ("3 of 12")	12pt, muted colour
Time labels	12pt medium, monospaced digits
MENU label on the wheel	11pt semibold, 0.06em tracking
Wheel icons (previous, next, play/pause)	14pt semibold SF Symbols
Wheel mode labels ("Wheel", Volume, Seek)	11pt semibold

User controls and presets

Six settings are stored independently; changing one never changes another, and a preset is simply a batch write of all six.

Control	Values	Default (Silver Classic)	What it drives
Body Color	any hex	#C9CED4	Chassis gradient, edge, bezel tone, Minimal-style glyph contrast
Ring Style	Classic, Minimal + Icons	Classic	How the wheel is painted; touch handling is identical in both
Ring Color	any hex	#F3F5F7	Ring fill or outline, ring edge, centre-button stroke, pressed tint
Interface	Dark, Light, Retro Color, Retro LCD	Dark	Every screen surface and text token
Accent	any hex	#2B6FC8	Selected row, progress fill, active toggle (Dark and Light only)
Atmosphere	Off, Subtle, Rich	Off	Artwork tint on Now Playing

Three more values are stored alongside them: the preset id (or "custom"), a wheel-glyph override ("auto" or a hex), and a Tinted Glyphs switch for the mini presets. Applying a preset writes everything at once and resets the glyph override to auto. Editing any single control afterwards sets the preset to Custom and leaves every other value exactly as it was.

The twenty presets. Glyph columns give the label colour on the wheel (Classic) and on the body (Minimal). "Compact" bodies draw the wheel at 68% instead of 62%.

#	Preset	Body	Wheel	Glyph on wheel	Glyph on body	Accent	Finish	Default style	Default interface	Atmosphere	Notes
1	Silver Classic	#C9CED4	#F3F5F7	#58616B	#1D2228	#2B6FC8	satin	Classic	Dark	Off	app default
2	Black Classic	#17191D	#252A31	#E2E6EB	#E2E6EB	#2B6FC8	gloss	Classic	Dark	Off	keyline fires
3	Signature White	#F2F2EF	#FFFFFF	#6B737D	#1D2228	#2B6FC8	gloss	Classic	Dark	Off	keyline fires
4	Graphite Classic	#43474D	#16181B	#C9CED4	#C9CED4	#2B6FC8	satin	Classic	Dark	Off	

#	Preset	Body	Wheel	Glyph on wheel	Glyph on body	Accent	Finish	Default style	Default interface	Atmosphere	Notes
5	U2 Red Wheel	#111215	#B93248	#FFFFFF	#FFFFFF	#B93248	gloss	Classic	Dark	Off	
6	Product Red Body	#A7193F	#F3F5F7	#58616B	#FFFFFF	#2B6FC8	satin	Classic	Dark	Off	
7	Mini Gold	#D9C38E	#ECEEF0	#7A6330	#1D2228	#8A6A1F	satin	Classic	Dark	Off	compact, tinted glyphs
8	Mini Pink	#E9A9C3	#ECEEF0	#9C4870	#1D2228	#A3406E	satin	Classic	Dark	Off	compact, tinted glyphs
9	Mini Blue	#8FBBDB	#ECEEF0	#2F6A94	#1D2228	#2C6A99	satin	Classic	Dark	Off	compact, tinted glyphs
10	Mini Green	#A8D08F	#ECEEF0	#387028	#1D2228	#3B7A2C	satin	Classic	Dark	Off	compact, tinted glyphs
11	Nano Blue	#287EB8	#F3F5F7	#4D5A66	#FFFFFF	#235D92	satin	Classic	Dark	Off	compact; Minimal glyph 4.41:1
12	Nano Pink	#D66F97	#F3F5F7	#4D5A66	#1D2228	#934066	satin	Classic	Dark	Off	compact
13	Nano Green	#56A779	#F3F5F7	#4D5A66	#1D2228	#235D48	satin	Classic	Dark	Off	compact
14	Nano Purple	#6E4BA8	#F3F5F7	#4D5A66	#FFFFFF	#6E4BA8	satin	Classic	Dark	Off	compact
15	Nano Orange	#E7792B	#F3F5F7	#4D5A66	#1D2228	#B4541A	satin	Classic	Dark	Off	compact
16	Nano Yellow	#E9C63C	#F3F5F7	#4D5A66	#1D2228	#8A6D00	satin	Classic	Dark	Off	compact
17	Modern Album Glow	#1B1B23	#C9C7FF	#1D2228	#F1F0FA	#6A58E0	satin	Minimal + Icons	Dark	Subtle	
18	Midnight Studio	#121212	#2A2A2A	#FFFFFF	#FFFFFF	#1ED760	satin	Classic	Dark	Subtle	black selection text
19	Porcelain	#E7E5E0	#F8F7F4	#2B2B2B	#2B2B2B	#E5531A	matte	Minimal + Icons	Light	Off	fixed #D3D0C9 edge, no gloss
20	Liquid Glass	#22262E	#8E96A3	#1D2228	#FFFFFF	#0A84FF	satin	Minimal + Icons	Dark	Rich	Classic ring is translucent white over blur

Mini presets ship with Tinted Glyphs on, so the wheel labels take the body-tinted colour in the table. With Tinted Glyphs off they use #58616B instead. The default style, interface and atmosphere for presets 1 to 16 were not specified and are a proposed default.

Interface appearances

Four fixed palettes drive every screen surface; Dark and Light derive their selection and progress colours from the accent, while the two retro looks are period-fixed and ignore the accent.

Token	Dark (default)	Light	Retro Color	Retro LCD
screenBackground	#101317	#F6F7F9	#FFFFFF	#A9C1D3
panelBackground (status bar)	#202630	#FFFFFF	#FFFFFF	#A9C1D3
raisedPanel (platter, song-list header)	#293341	#EEF1F4	#F2F4F6	#9DB5C7
divider	#394451	#D5DBE2	#E3E6EA	#7F97A9
primaryText	#F5F7FA	#12161B	#000000	#1C2A36 (ink)
secondaryText	#BBC4CF	#46505C	#5E6670	#2E4252
mutedText	#8E99A8	#5F6A78	#7A828C	#35485A
progressTrack	#2E3641	#D5DBE2	#D5DBE2	#9DB5C7
Status bar header	flat panelBackground	flat panelBackground	gradient #F3F5F7 to #C9CED4	flat panelBackground
Selected row	derived from accent	derived from accent	gradient #356FCC to #1F57B0, white text	inverted: #1C2A36 row, #A9C1D3 text
progressFill	derived from accent	derived from accent	#2463C4	#1C2A36 (ink)
System colour scheme	dark	light	light	light
Artwork atmosphere allowed	yes	yes	no	no

The dark progress track is #2E3641 on purpose: the previously proposed #657181 gives a 1.01:1 contrast against the accent fill and is unreadable. Under Increase Contrast, mutedText is replaced by secondaryText in every palette.

Derived colours: selection and progress

In Dark and Light the selection row and the progress fill are computed from the accent at render time by three rules, and the results match the specification's fixture table in all 64 cases.

1. Selection row. If white text on the accent reaches 4.5:1, use the accent with white text. Otherwise, if the accent's HSL hue is between 60° and 160° (yellows and greens) and black text reaches 4.5:1, use black text. Otherwise darken the accent in 1% lightness

steps until white text passes.

2. Progress fill. The fill must reach 3:1 against both the track and the screen. On dark screens the accent is lightened 1% at a time until it does; on light screens it is darkened.
3. Stepping model. Lightness steps are HSL lightness, re-quantised to 8-bit after every step. This is the model that reproduces the fixtures exactly; OKLCH and single-shot HSL both drift by one or two units per channel.

Accent	Presets	Selection row	Selection text	Contrast	Fill on Dark	Fill on Light
#2B6FC8	Silver, Black, Signature White, Graphite, Product Red	#2B6FC8	#FFFFFF	5.0:1	#3C7FD5	#2B6FC8
#B93248	U2 Red Wheel	#B93248	#FFFFFF	5.8:1	#D1566C	#B93248
#8A6A1F	Mini Gold	#8A6A1F	#FFFFFF	5.0:1	#9E7924	#8A6A1F
#A3406E	Mini Pink	#A3406E	#FFFFFF	6.0:1	#C05F8D	#A3406E
#2C6A99	Mini Blue	#2C6A99	#FFFFFF	5.8:1	#3585BD	#2C6A99
#3B7A2C	Mini Green	#3B7A2C	#FFFFFF	5.2:1	#458E31	#3B7A2C
#235D92	Nano Blue	#235D92	#FFFFFF	6.9:1	#3084C6	#235D92
#934066	Nano Pink	#934066	#FFFFFF	6.6:1	#BB6586	#934066
#235D48	Nano Green	#235D48	#FFFFFF	7.7:1	#30916F	#235D48
#6E4BA8	Nano Purple	#6E4BA8	#FFFFFF	6.5:1	#8D73C2	#6E4BA8
#B4541A	Nano Orange	#B4541A	#FFFFFF	5.0:1	#CC6020	#B4541A
#8A6D00	Nano Yellow	#8A6D00	#FFFFFF	4.9:1	#9E7D00	#8A6D00
#6A58E0	Modern Album Glow	#6A58E0	#FFFFFF	5.1:1	#7E6CE5	#6A58E0
#1ED760	Midnight Studio	#1ED760	#000000	10.9:1	#1ED760	#0F8A40
#E5531A	Porcelain	#CC4916 (darkened)	#FFFFFF	4.6:1	#E5531A	#D64D17
#0A84FF	Liquid Glass	#0073EB (darkened)	#FFFFFF	4.5:1	#0A84FF	#0078F5

Every fill reaches at least 3.0:1 against its track and 3.9:1 against its screen. Modern Album Glow uses #6A58E0 rather than #7868E8 because white text on #7868E8 is only 4.25:1.

Body and bezel rendering

The chassis is drawn entirely from the body colour and the preset's finish; nothing is a bitmap.

- Body gradient: vertical, from body lightened 6% at the top to body darkened 6% at the bottom (HSL lightness). Matte finishes use 2%.
- Edge: a 1px inner stroke at body darkened 18%, following the 40pt rounded corners. Porcelain uses a fixed #D3D0C9 edge.
- Finish: satin is the gradient alone; gloss adds a sharper white highlight band from the top (22% to 7% to clear over the upper half); matte is the flat 2% gradient with no highlight.
- Bezel: #0B0D10 when the body's HSL lightness is below 0.5, #1A1D22 otherwise.

Preset	Body top	Body bottom	Edge	Bezel
Silver Classic	#DADDE2	#B8BFC6	#96A0AB	#1A1D22
Black Classic	#25282E	#090A0C	#000000	#0B0D10
Signature White	#FFFFFF	#E4E4DE	#C9C9BC	#1A1D22
Graphite Classic	#51565D	#35383D	#181A1C	#0B0D10
U2 Red Wheel	#1F2026	#030404	#000000	#0B0D10
Product Red Body	#C21D49	#8C1535	#570D21	#0B0D10
Mini Gold	#E1CFA5	#D1B777	#C29F49	#1A1D22
Mini Pink	#EFC1D4	#E391B2	#D66090	#1A1D22
Mini Blue	#A6C9E2	#78ADD4	#4A91C5	#1A1D22
Mini Green	#B9D9A5	#97C779	#76B54E	#1A1D22
Nano Blue	#2D8FD1	#236D9F	#184A6D	#0B0D10
Nano Pink	#DD87A8	#CF5786	#B63466	#1A1D22
Nano Green	#6AB289	#4C936A	#376A4D	#0B0D10
Nano Purple	#7E5CB6	#604293	#442F69	#0B0D10
Nano Orange	#EA8A46	#DB6919	#A44F13	#1A1D22
Nano Yellow	#ECCE57	#E6BE21	#B59414	#1A1D22
Modern Album Glow	#282834	#0E0E12	#000000	#0B0D10
Midnight Studio	#212121	#030303	#000000	#0B0D10
Porcelain (matte)	#EBEAE6	#E3E0DA	#D3D0C9 (fixed)	#1A1D22
Liquid Glass	#2F3540	#15171C	#000000	#0B0D10

On the six near-black bodies the 18% darkening clamps to pure #000000, so the edge reads as a black hairline rather than a tinted one. Whether to floor the edge at a minimum lightness is an open question below.

Click wheel

The wheel is two stacked layers: a fixed, invisible hit layer that never changes, and a paint layer that Ring Style swaps; switching style changes only what is drawn.

Geometry (both styles)	Value
Wheel diameter	62% of body width; 68% on mini and nano bodies
Centre button	36% of the wheel diameter
Label radius	68% of the outer radius: MENU top, previous left, next right, play/pause bottom
Hit regions	Centre circle, then four 90° sectors of the ring centred on top, right, bottom, left, extended 8pt past the outer edge
Rotation	Angular drag anywhere on the ring; one step per 30° of travel; clockwise scrolls down
Tap	Release within 12pt of the touch-down with no scroll step
Long press	500ms held on MENU (jump to main menu) or previous/next (accelerating seek)
Pressed highlight	The touched sector or centre tints for at least 90ms, or until release when held

Paint	Classic	Minimal + Icons
Ring	Solid fill in Ring Color with a 1px edge at Ring Color darkened 10%	2px stroke in Ring Color; the body shows through the interior
Centre button	Ring Color lightened 3% (the body colour on mini/nano presets) with a 1px Ring Color stroke at 40%	Body colour with a 1.5px Ring Color stroke at 60%
Pressed tint	Ring Color darkened 8% on light wheels, lightened 8% on dark wheels	Ring Color at 16% opacity

Paint	Classic	Minimal + Icons
Gloss presets	Add an 8% white radial highlight on the upper left of the ring	No change
Labels	Coloured against the wheel fill	Coloured against the body
Liquid Glass	Ring is white at 14% over a system blur (solid #8E96A3 under Reduce Transparency)	Standard outline

Contrast keyline. When Ring Color against Body Color falls below 1.5:1 in Classic or 3:1 in Minimal, a 1px ring is added at the outer edge: white at 18% on dark bodies, black at 14% on light bodies. This is what keeps Black Classic and Midnight Studio readable without changing the user's colours. It fires for Silver Classic, Black Classic, Signature White, Mini Gold, Mini Green, Midnight Studio and Porcelain in both styles, and for Graphite, the other minis and most nanos in Minimal only.

Preset	Ring edge (−10%)	Classic centre	Classic pressed
Silver Classic	#D4DCE3	#FCFDFD	#DBE1E7
Black Classic	#0F1114	#2C313A	#373E48
Signature White	#E6E6E6	#FFFFFF	#EBEBEB
Graphite Classic	#000000	#1D1F23	#282C31
U2 Red Wheel	#912738	#C5354D	#CD475D
Product Red Body	#D4DCE3	#FCFDFD	#DBE1E7
Minis (wheel #ECEEF0)	#D0D4DA	body colour	#D5DADE
Nanos (wheel #F3F5F7)	#D4DCE3	body colour	#DBE1E7
Modern Album Glow	#9894FF	#D8D6FF	#A29EFF
Midnight Studio	#101010	#323232	#3E3E3E
Porcelain	#E4E0D5	#FEFEFD	#E8E5DB
Liquid Glass	#727C8C	#969EAA	#788191

Wheel glyph colour and contrast

Every preset's table glyph colour clears 4.5:1 on its real surface in both styles except one, so the contrast rule never had to override a designed value.

Resolution order for the label colour: the user's Wheel Glyphs override if set; otherwise the preset's table value (wheel column in Classic, body column in Minimal; the #58616B fallback for minis with Tinted Glyphs off); otherwise white or #1D2228 by measurement. The result is then checked against its actual surface (the ring fill in Classic, the body in Minimal). If it falls below 4.5:1 it is replaced by white or #1D2228, whichever contrasts more.

Preset	Classic glyph	On wheel	Minimal glyph	On body	Keyline Classic / Minimal
Silver Classic	#58616B	5.76:1	#1D2228	10.11:1	yes / yes
Black Classic	#E2E6EB	11.52:1	#E2E6EB	14.04:1	yes / yes
Signature White	#6B737D	4.80:1	#1D2228	14.27:1	yes / yes
Graphite Classic	#C9CED4	11.23:1	#C9CED4	5.90:1	no / yes
U2 Red Wheel	#FFFFFF	5.81:1	#FFFFFF	18.73:1	no / no
Product Red Body	#58616B	5.76:1	#FFFFFF	7.36:1	no / no
Mini Gold	#7A6330 (tinted)	4.94:1	#1D2228	9.26:1	yes / yes
Mini Pink	#9C4870 (tinted)	5.05:1	#1D2228	8.33:1	no / yes
Mini Blue	#2F6A94 (tinted)	5.00:1	#1D2228	7.85:1	no / yes
Mini Green	#387028 (tinted)	5.13:1	#1D2228	9.21:1	yes / yes
Nano Blue	#4D5A66	6.47:1	#FFFFFF	4.41:1 (exception)	no / no
Nano Pink	#4D5A66	6.47:1	#1D2228	5.02:1	no / yes
Nano Green	#4D5A66	6.47:1	#1D2228	5.49:1	no / yes
Nano Purple	#4D5A66	6.47:1	#FFFFFF	6.49:1	no / no
Nano Orange	#4D5A66	6.47:1	#1D2228	5.46:1	no / yes
Nano Yellow	#4D5A66	6.47:1	#1D2228	9.61:1	no / yes
Modern Album Glow	#1D2228	9.98:1	#F1F0FA	15.14:1	no / no
Midnight Studio	#FFFFFF	14.35:1	#FFFFFF	18.73:1	yes / yes
Porcelain	#2B2B2B	13.22:1	#2B2B2B	11.25:1	yes / yes
Liquid Glass	#1D2228	5.37:1	#FFFFFF	15.17:1	no / no

With Tinted Glyphs off, the four minis use #58616B on the wheel at 5.41:1. Nano Blue in Minimal is the one documented exception: white on #287EB8 reaches 4.41:1 (icons still pass 3:1), and #1D2228 would be worse at 3.7:1, so white stays and the MENU label is rendered semibold like every other label. Liquid Glass's Classic value is measured against the solid fallback colour; over the translucent ring the real surface depends on what is behind it.

Now Playing and album-art atmosphere

Now Playing is the one screen that may take colour from the artwork, and it does so behind the content, never in the text.

Layout, top to bottom: status bar titled Now Playing; a 120pt cover with 6pt corners and a soft shadow beside the title block (title 17pt semibold, artist and album 14pt, queue position 12pt); a 30pt progress row; the Wheel selector with Volume and Seek capsules; and the previous, play/pause, next transport row. The active capsule uses the selection colour and selection text; the inactive one is outlined in muted text at 50%.

Extraction runs once per artwork, cached, off the main thread:

1. Downsample the cover to 32 by 32.
2. Cluster the pixels in OKLab with k-means, k = 5, 12 iterations.
3. Drop clusters with chroma below 0.03. If none remain (grayscale art), there is no palette.
4. c1 is the cluster with the highest population times chroma.
5. c2 is the next cluster at least 30° away in hue, or c1 with its hue shifted 25°.

Clamp (OKLCH)	Dark	Light
Lightness	0.28 to 0.38	0.86 to 0.92
Chroma, Subtle	at most 0.12	at most 0.08
Chroma, Rich	at most 0.16	at most 0.08

The background is a 160° linear gradient: c1 at 0%, c2 at 45%, screenBackground from 85%. Over it sits screenBackground at 55% opacity (Subtle) or 35% (Rich). Text on atmosphere is pure white (Dark) or pure black (Light), never tinted; secondary text is the same colour at 78% and muted at 62%. Ten points behind the title block and the controls are sampled analytically from the gradient model, and if the lightest of them gives less than 4.5:1 against the text the overlay rises in 0.05 steps until it does. On very light, very saturated and deep-dark test covers the worst case never dropped below 12.8:1, so the default overlays held.

Controls sit on a platter of raisedPanel at 60% over a system blur, or raisedPanel at 85% with no blur under Reduce Transparency. The progress track on atmosphere is white at 24%; the fill is the accent if it reaches 3:1 against the local background behind the bar, otherwise white.

With no artwork, or grayscale artwork, the screen shows screenBackground with an 8% accent radial glow behind the artwork position. On a track change the background cross-fades over 600ms; the gradient is never animated continuously. Atmosphere never appears on menus, lists, settings, the body or the wheel, and it is disabled in Retro Color, Retro LCD and under Increase Contrast.

Everything selectable in Settings

All appearance controls live under Settings, App Settings, on a screen titled Appearance; every change applies instantly as a live preview and persists across launches.

Appearance row	What the user sees	Options	Flips preset to Custom
Preset	Current preset name, or Custom; opens a list with a swatch per preset (body disc, wheel ring, accent dot) and a tick on the current one	20 presets	no (sets the preset)
Body Color	Current hex; opens a swatch list	20 body colours, named after their presets	yes
Ring Style	Current style	Classic, Minimal + Icons	yes
Ring Color	Current hex; swatch list	10 distinct wheel colours from the presets	yes
Wheel Glyphs	Auto or the override hex; swatch list	Auto, White, Ink #1D2228, plus 11 distinct glyph colours from the presets	yes
Tinted Glyphs	On or Off, toggled in place	On, Off	yes
Interface	Current appearance; swatch shows its screen colour	Dark, Light, Retro Color, Retro LCD	yes
Accent	Current hex; swatch list	16 distinct accents from the presets	yes

Appearance row	What the user sees	Options	Flips preset to Custom
Atmosphere	Current level	Off, Subtle, Rich	yes
Language	English	English only	no
Immersive Mode	On or Off, toggled in place	On, Off (full-phone Cover Flow versus Cover Flow inside the iPod screen)	no

The colour pickers offer curated palettes rather than free hex entry because the app is driven by the click wheel and has no keyboard. The stored values are still arbitrary hex, so a future hex field would need no model change.

Other settings on the main Settings screen are functional rather than visual: Shuffle (Off, Songs; Albums via the Shuffle Albums menu), Repeat (Off, All, One), Sort Order (Alphabetical, Date Added), Main Menu and Music Menu customisation (seven library sections with tick toggles and a reset), Brightness (the real screen brightness, adjusted by the wheel), Haptics (On, Off) and Clicker (On, Off).

Accessibility behaviours

Three system settings change rendering, and the wheel exposes every control to VoiceOver without relying on its painted shapes.

Setting	Behaviour
Reduce Motion	The Now Playing atmosphere swaps instantly instead of cross-fading over 600ms
Reduce Transparency	Every blur is replaced by solid raisedPanel: the Now Playing platter becomes raisedPanel at 85%, the Liquid Glass ring becomes solid #8E96A3
Increase Contrast	Atmosphere is turned off and mutedText is raised to secondaryText in every palette
VoiceOver	The wheel is one element labelled "Click wheel" with an adjustable action for scrolling and named actions for Select, Menu, Main menu, Play or pause, Next track and Previous track; the painted labels are hidden from the accessibility tree

Touch targets: the centre button is 36% of the wheel diameter (about 87pt in portrait on a 390pt-wide phone, 64pt in landscape), and each of the four sectors spans the full ring width plus 8pt of slop, so no target drops below 44pt in either style. The thin Minimal outline does not shrink any target because the hit layer is independent of the paint.

Open questions for the design team

These are the judgement calls made while implementing, each reversible, where a designer's decision would be better than mine.

- [ ] Edge on near-black bodies clamps to #000000 (Black Classic, U2, Graphite, Modern Album Glow, Midnight, Liquid Glass). Keep as a black hairline, or floor the edge at a minimum lightness?
- [ ] Presets 1 to 16 default to Classic wheel, Dark interface, atmosphere Off. Should the legacy hardware presets open in Retro Color for period authenticity instead?
- [ ] Porcelain defaults to the Light interface, the only preset that does. Confirm.
- [ ] Atmosphere is disabled in Retro Color as well as Retro LCD. The spec only forbade it in LCD; confirm the Retro Color choice.
- [ ] Colour pickers are curated preset palettes. Is a free hex field wanted, and if so what input UI fits a wheel-driven app?
- [ ] Nano Blue in Minimal is 4.41:1 with white labels. Accept the documented exception, or nudge the body token toward #2678B2 to cross 4.5:1?
- [ ] Blur radii are not controllable with SwiftUI materials; both the platter and the Liquid Glass ring use the system ultra-thin material. Accept the system blur?
- [ ] MENU is rendered as the word in both styles per the spec; an earlier iteration used a three-line icon in Minimal + Icons. Confirm the word.
- [ ] The battery indicator keeps its ten-stop green and red asset gradient, the only chromatic element left in the status bar. Keep it as an iconic exception or flatten it to a token?
- [ ] Cover Flow's own screen still uses a blurred-artwork backdrop (pre-existing). Does that count as an album detail view, where the spec allows atmosphere, or should it be neutral?
- [ ] In immersive Cover Flow the track list is viewable but its rows are not tappable, so Play always starts from track one. Product gap worth a small design.
- [ ] Pressed highlight holds for 90ms minimum. Confirm the feel once it can be tried on device.
- [ ] The asset catalogue still contains the retired gradients (progressFill1 to 6, menuItemBackground1 to 5, statusBar1 to 4, wheelU2 and friends). They can be deleted once the new system is signed off.

Code map

Each part of the system lives in one file under iPlayr/iPlayr, so a design change maps to a single place.

Area	File	What it holds
Colour maths	Core/Theme/ColorMath.swift	sRGB, WCAG contrast, HSL stepping, OKLab and OKLCH
Contrast helper	Core/Theme/ColorContrast.swift	White-or-ink foreground chooser
Appearance tokens and rules	Core/Theme/ThemeTokens.swift	The four palettes, selection and progress derivation, glyph rule
Presets	Core/Theme/ThemePresets.swift	The twenty presets and hardware traits
Persisted settings	Core/Theme/Theme.swift	ThemeManager: six controls, preset logic, migration, glyph resolution
Artwork atmosphere	Core/Theme/ArtworkAtmosphere.swift	Palette extraction, cache, clamping, gradient and overlay model
Chassis	Screens/Main/MainScreen.swift	Body gradient, edge, finish
Bezel	Components/iPlayrScreen.swift	Screen frame colour
Click wheel	Components/iPodButtons.swift	Geometry, hit layer, paint layer, labels
Rows and status bar	Components/MenuItemView.swift, CollectionMenuItem.swift, StatusBar.swift	Token-driven rows and header
Progress bars	Screens/Player/NowPlayingControls.swift	Capsule bar, scrubber, volume bar, time labels
Now Playing	Screens/Player/PlayerView.swift	Layout, atmosphere, platter, typography
Settings screens	Screens/Theme/ThemeView.swift	Appearance hub, presets list, pickers, swatches

Area	File	What it holds
Fixture tests	iPlayrTests/ThemeDerivationTests.swift	Fixture table, contrast sweep, hit-map and preset-to-custom tests (needs a test target in Xcode)
